Decision Tree Model Performance

Accuracy: 0.5862   Precision: 0.3038  
Recall: 0.8065   F1 Score: 0.4413  
Model uses class\_weight='balanced' for the no-show class.

Optimization Recommendations

- Prioritize targeted follow-up for 10,361 high-risk appointments.
- Review SMS reminder strategy using the observed no-show differences.
- Use weekday and waiting-time patterns to support scheduling and confirmation.
- Monitor recall and precision before operational deployment.
